Additional Info:

Specimen Adequacy: Satisfactory for evaluation: endocervical cells present

General Categorization:

High-grade squamous intraepithelial lesion (HSIL), CIN-2.

***ELECTRONIC SIGNATURE:** PIERCE, BENJAMIN*

Cervical cytology is a screening test with limited sensitivity. Regular screening is critical for cancer prevention. Pap tests are primarily effective for the detection/prevention of squamous cell carcinoma, not adenocarcinoma or other cancers (*The Pap Test; R.M. DeMay; pg. 243, 2005*).
